FINAL PROJECT

Presentation

NOOK. NEVER LOSE YOUR NEXT FAVOURITE FIND

WHY PEOPLE NEED *Nook*

Trip ideas live on TikTok, Instagram, Facebook and YouTube. Each app saves them separately. Nothing groups by trip or searches across apps.

"Planning a real trip" and "Collecting someday ideas"

WHAT IS *Nook*

Paste a link. Nook reads the post, finds the place and files it in a trip.

Everything stays on your device.

KEY *Features*

Save by link or note

Group into trips

Search all platforms

Map of saved places

Explore Itinerary

Recently Deleted

APP *Demo*

TECH *Stack*

1. How the system works

Link → Platform Lookup → Claude Haiku 4.5 → Edit → Drift (SQLite)

2. Technologies Used

- Flutter — Web app
- Drift — Local database (SQLite)
- flutter_map + OpenStreetMap — Maps
- http — API requests
- GitHub Pages — Deployment

3. Key Technical Decisions

- Drift over Hive — A post can belong to one specific trip.
- Forced tool call — Keeps AI output structured.
- No API key — App runs in sample/demo mode.

USE OF *AI*

CHALLENGES & *Solutions*

URL model guessing → Read the post first; null beats a guess

API key security → Keyless sample mode for web builds

Folder tap bug → Shared guard applied to every folder

Testing & Improvements

- Run the 40-link extraction test
- Fix 5 outdated tests

Future Development

- Connected Platforms auto-sync
- Secure API key behind a server

WHAT'S *Next*
